What to Expect from Bullseye Glass

Color Variation

While Bullseye strives for consistent colors, our glass is a handmade product and colors may vary between production runs (and from images in this resource). Some colors may change upon repeated firing or with extensive heatwork. We recommend that you test samples of glass using the same firing cycles and processes to be used in finished pieces. When close color matches are needed, we recommend testing new dates first to ensure the range of color between batches will meet the needs of your project. Bullseye glasses are formulated for fired color. Unfired glass color may vary.

More questions? See *About Our Glass* for working notes and performance characteristics of specific glasses. See also *TechNotes 3: Compatibility of Glasses*.

Colors That Strike

Bullseye produces many glasses that appear pale or even colorless in their cold form but “strike” or mature to a target color when fired to the right temperature. These styles are marked with a .

- **Kilnformers:** When choosing a style, focus on the fired sheet color. Like ceramic glazes, the color will emerge after sufficient heatwork.
- **Stained glass and mosaic makers:** Be aware of strikers. Use only if you’re willing to pre-fire the glass before use, or select it in person. The unfired sheet colors for strikers vary widely.

Examples of Strikers at Various Process Temperatures

Key illustrations indicate which styles differ from color to struck form. Keep in mind that struck color may vary depending on temperature, atmosphere, and amount of heatwork. (See chart at right.) For example, failing to hold Ruby Red Tint (001824-0030-F) for an adequate time during the pre-rapid heat stage of a firing cycle can prevent the glass from striking correctly. This results in a blue-brown cast (or sapphirine effect) instead of a true ruby red color. See our *QuickTip: Gold-bearing Pink Tints* for more information.

Compatibility

Bullseye glasses are well known for reliable compatibility. But it’s important to understand the conditions of our factory testing, especially if you intend to fire glass under unusual conditions.

At Bullseye, we test glasses known to be fairly stable by firing them to a temperature of 1500 °F (815 °C) and then holding for 15 minutes before annealing. Once cooled, these tests are viewed for stress through a polarized light filter and graded accordingly. We fire glasses known to be less stable three times to make sure they’ll perform well under multiple firing conditions, such as those used to fuse and slump a plate.

If you are using a heat process that involves an extra-high temperature or an unusually long firing time, we recommend that you test the glass yourself, under conditions specific to your project. For example, if you want to include flameworked elements in a kilnformed project, remember that flamework takes glass to temperatures exceeding the compatibility tests we do at the factory and that some glasses are more sensitive to extensive work in the flame. Therefore, it will be important not to overwork your glass during flameworking and to test the flameworked components for compatibility using the full range of kilnforming processes planned for the finished project.

Approximate color before firing. Color after a full fuse firing. A solid sample indicates no change from unfired to fired. Each sample is 8” (20 cm) wide.

At left: an example of a “key illustration” that indicates cold, unfired glass adjacent to a sample of a full fused piece of glass.

Below: Struck color based on heatwork. In addition, see what happens to Ring Mottles, non-fusible glass, when exposed to heatwork

At Right: “Champagne” bubbles are a normal feature of kiln-glass. See *TechNotes 5: Volume & Bubble Control* at bullseyeglass.com

Also Note: some processes that may not appear to exceed the parameters of the compatibility test actually do exceed it. For example, holding some glasses for long times at temperatures around 1400 °F (760 °C), which is in the devitrification range, can cause the glass to change dramatically.

Many artists (the late Klaus Moje, for example) are able to push Bullseye glass to high temperatures for long times with exceptionally good results, but their success is ensured by testing. No manufacturer can guarantee glass to perform as expected under all imaginable working conditions. Testing is a wise practice with whatever glass you use.

Bullseye Coding System

Each Bullseye glass product is coded according to this system.

000100 – 0008 – F – P005

Item code for Black, Powder, Fusible, 5 lb/2.3 kg jar.

6-Digit Style Code

Indicates the base glass color.

- OOXXXX SINGLE COLOR OPALESCENT
- OO1XXX SINGLE COLOR TRANSPARENT
- OO2XXX 2-COLOR STREAKY
- OO3XXX 3-COLOR STREAKY
- OO4XXX COLLAGE GLASS
- OO6XXX RING MOTTLE

4-Digit Suffix, Sheet Glass

Indicates surface treatment, texture, and/or thickness.

Grade Codes

Glass is assigned one of six grades.

F: Often called “Fusible,” a glass that has passed factory testing for color and compatibility in kilnwork. Also called “Tested Compatible” or “Bullseye Compatible.” Recommended for kilnwork, flamework, stained glass, or mosaic. (Stained glass and mosaic makers, see note on page 50 of the catalog regarding strikers.)

P: First-quality non-fusible glasses are called “Standard Production.” Not recommended for kilnwork but good for stained glass or mosaic.

B: Fusible-curious glasses. Compatible, but fired color or appearance may not fall within the accepted color range or may have minor flaws. Sometimes called “Furious.” Discounted. Recommended for kilnwork, flamework, stained glass, or mosaic. (Stained glass and mosaic makers, see note on page 50 regarding strikers.)

C: Non-fusible, non-standard glasses are graded and marked “Curious.” These may not fall within the accepted color range or may have minor flaws. Discounted. Not recommended for kilnwork but good for stained glass or mosaic.

F Rod: Recommended for both kilnwork and torchwork.

T Rod: Recommended for torchwork only.

Size Codes

All metric conversions are approximate. All color sheets have rolled edges. Therefore, some sheet glass dimensions are approximate due to the rolled edges of this handcrafted product.

Sheet Glass (approximate)

-1010	10" x 10" (25.4 x 25.4 cm)
-full	35" x 20" (88.9 x 50.8 cm)
-half	17" x 20" (43.2 x 50.8 cm)

Confetti

-0204	single color 4 oz (113 g) jar

Product Specifications

SHEET GLASS		
SUFFIX	THICKNESS	MAXIMUM DIMENSIONS ARE APPROXIMATE
thin (-005x)	2 mm (3/32")	20" x 17" (51 x 43 cm)
standard (-003x)	3 mm (1/8")	20" x 35" (51 x 89 cm)*
thick (-0060)	6 mm (1/4")	20" x 35" (51 x 89 cm)*
* minimum sheet length 33" (84 cm)		

FRIT		
SUFFIX	GRAIN SIZE	SCREEN RETENTION
Extra large (-0005)	5.2–30 mm	Retained on a 4 mesh screen
Coarse (-0003)	2.7–5.2 mm	Passes through a 4 mesh screen and is retained on an 8 mesh screen
Medium (-0002)	1.2–2.7 mm	Passes through a 8 mesh screen and is retained on an 16 mesh screen
Fine (-0001)	0.2–1.2 mm	Passes through a 16 mesh screen and is retained on an 80 mesh screen
Powder (-0008)	0.2 mm and finer	Passes through an 80 mesh screen

STRINGER		
SUFFIX	DIAMETER	LENGTH
0.5 mm (-0507)	ranges from 0.5 to 0.6 mm	≈17" (432 mm)
1 mm (-0107)	ranges from 0.7 to 1.2 mm	≈17" (432 mm)
2 mm (-0272)	ranges from 1.7 to 2.2 mm	≈17" (432 mm)

ROD		
SUFFIX	DIAMETER	LENGTH
(-0576)	4–6 mm	17" (432 mm)
7–9 mm (-0876) clear only	7–9 mm	17" (432 mm)

RIBBON		
SUFFIX	THICKNESS	DIMENSIONS
(-0401)	1 mm	4 mm x 17" (432 mm)

SIZZLESTIX		
SUFFIX	THICKNESS	DIMENSIONS
(-0309, -0371)	2 mm	3 mm x 17" (432 mm)
(-0609, -0671)	2 mm	6 mm x 17" (432 mm)

CONFETTI		
DIMENSIONS		
Paper-thin glass shards measure from 0.25" (or less) to 3" at their longest dimension (6 to 76 mm).		

CULLET	
CHUNK SIZE	SPECIFIC GRAVITY
0.5" to 6" (13 to 152 mm)	About 2.5 for most Bullseye glasses

Prices

Bullseye offers a generous volume discount structure—see below. To learn about wholesale pricing, please call or email our Sales Department. Prices are subject to change without notice.

Volume Discount

We offer discounts online, via mail order, and through our Bullseye Resource Centers. Discounted items include all sheet glass, billet, frit, ribbon, rod, stringer, confetti, molds, and items marked with the  symbol.

VOLUME DISCOUNTS

Order Amount	Discount
\$200–\$499	10%
\$500–\$799	20%
\$800–\$1,099	30%
\$1,100–\$1,599	40%
\$1,600 +	50%

Notes and Restrictions: Prices listed are retail. Sheet glass is sold by the piece. Some listed sheet glass dimensions are approximate, due to the handcrafted nature of the product. Discounts apply to single orders only, not a combination of orders. Your order can include any combination of items (glass, tools, etc.) to qualify for a greater discount, but the discount will only be applied to qualifying items.

Packing

We have boxes especially designed for shipping sheet glass in most Bullseye sizes.

- 10 x 10s = box can hold 1–40, 3 mm sheets
- Half sheets = box can hold eight, 3 mm sheets
- Full sheets = box can hold eight, 3 mm sheets

Large-quantity sheet glass orders are packed into sturdy wooden crates, then banded together or palletized for safe transport. For orders of more than 20 sheets, contact the Sales Department at sales@bullseyeglass.com or 503.232.8887

Shipping

Most parcel orders ship within two business days. We must have a street address for UPS delivery. Contact sales@bullseyeglass.com for freight options.

Returns

Contact us for authorization and instructions. A credit will be issued for merchandise returned in new condition within 30 days of purchase. Restocking fees may apply.

Gift Cards

Surprise your friends and family with one—or drop a hint and make it easy for them to get you a glassy gift!

Bullseye Gift Cards are sent to the Recipient Email within one business day. If you would like to deliver the gift at a later time, enter your own email and then forward it at your convenience.

Bullseye Gift Cards are redeemable for anything Bullseye sells: glass, supplies, books, tools, and classes.

Order gift cards at shop.bullseyeglass.com
